

# STATS 607 – Programming and Numerical Methods in Statistics

**Fall 2018**

## Class Information

- **Days & Time:** Mondays & Wednesdays, 4pm –5:30pm.
- **Location:** 1372 EH.
- **Description:** This course is the first part to an advanced introduction to modern programming techniques used in statistics, modeling and data analysis. Course topics include: basic data structures, structured data formats, iteration and recursion, functional programming, classes and object-oriented programming, memory management, strategies for documenting and debugging code. This part of the course will cover programming fundamentals relevant for research on statistical methodology, and for working with large and complex data sets.
- **Textbook:** There's no official textbook. I will be adding resources for each lecture below.
- **Canvas:** You should access canvas frequently. There you will find important announcements.
- **Materials:** Class materials can be accessed at <https://github.com/marcio-mourao/Stats607-Fall2018>.
- **Course end date:** This is a half-semester course and will end on October 24, 2018.

## Instructor Information

- **Name:** Márcio Duarte Albasini Mourão.
- **Office:** 3550 Rackham, 915 E. Washington St. (@CSCAR).
- **Office Hours:**
- **Email:** mdam@umich.edu.

## GSI Information

- **Name:**
- **Office:**
- **Office Hours:**
- **Email:**

## Grading

Your scores in 4 assignments, with the tentative dates below, will determine your final grade in the course:

- **Assignment 1:**
  - **Out:** Sept 12, **Due:** Sept 19 (30%)
- **Assignment 2:**
  - **Out:** Sept 26, **Due:** Oct 3 (30%)
- **Assignment 3:**
  - **Out:** Oct 17, **Due:** Oct 24 (40%)

## Python Notebooks

I'll be using JupyterLab throughout this course. The JupyterLab is the next generation of the Jupyter Notebook and allows the creation and sharing of documents with text, code, equations and images. For additional details, see here: <https://jupyter.org>.

## Reading

Textbook: "Python for Data Analysis" by Wes McKinney, published by O'Reilly Media  
Python online tutorial: <https://docs.python.org/3/tutorial/index.html>.

# Schedule

## Week 1 (Sept 5)

**Lecture 1:** Introduction to Stats 607 and Python

## Week 2 (Sept 10 & 12)

**Lecture 2:** Control Flow and Function Arguments

**Lecture 3:** Data Structures

## Week 3 (Sept 17 & 19)

**Lecture 4:** Standard Library

**Lecture 5:** Input and Output

## Week 4 (Sept 24 & 26)

**Lecture 6:** Numpy

**Lecture 7:** Numpy

## Week 5 (Oct 1 & 3)

**Lecture 8:** Python Internals, Memory Management, Serialization

**Lecture 9:** Python Classes, Object Oriented Paradigm

## Week 6 (Oct 8 & 10)

**Lecture 10:** Pandas Dataframes

**Lecture 11:** Pandas Dataframes

**Week 7 (Oct 15 & 17)**

**Lecture 12:** Profiling and Optimizing Python Code

**Lecture 13:** Strategies for Documenting and Debugging Code

**Week 8 (Oct 22 & 24)**

**Lecture 14:** To be determined

**Lecture 15:** To be determined
